

Example:

Three Year Telecommunications Services and Equipment.

The [REDACTED] School District currently utilizes Golden West Telecommunications as the vendor for all local and long distance services for the telephones and fax machines located in the district. We currently have a total of 19 voice and 5 fax lines for the district. These services receive E-Rate funding as telecommunications services. As additional extensions/lines are needed we work closely with the vendor to implement these in the most efficient method. There is not a current need or plan to make major revisions to the phone systems in any of the district's schools.

The [REDACTED] School District leases fiber data circuits and switches from Golden West Telecommunications for the purpose of connecting all of the primary attendance locations together in a WAN with a gigabit backbone. The outlying rural schools are connected via DSL circuits also provided by Golden West Telecommunications. All of these services receive E-Rate funding as telecommunications services.

The [REDACTED] School District utilizes a total of eleven cellular phones that are contracted with Verizon Wireless on a two year agreement. This time frame of this agreement restarts each time new phones are received. This is done on an annual or biannual basis as the situation warrants. These services also receive E-Rate funding as telecommunications services.
